Astoria
machine

technical data

GRILLMASTER is a powerful European cooking device. With GRILLMASTER you can easily and quickly please and surprise your customers by serving the most fancy, hot and European-style "panini". It can be installed in minutes: make the electrical connection and you are in business (110V-60Hz for the single unit and 220V-60Hz for the double unit). In most cases GRILLMASTER can be operated without an exhaust hood. The quick operation and the high temperature (450°F) ensure the melting of cheeses and the heating of your ingredients without removing the natural moisture and taste of the food, while providing the full toasting of your "focaccia" bread.
